Product Check

This product is comprised of the following parts if it is of standard configuration.

If you find any fault in the contained model or any missing parts, contact us or our distributor.

1. Parts (The option is excluded.)	
No.	Part Name	Model
1	1 Controller Main Body [Refer to "How to read the model plate", read controller model code"]	
Accesso	pries	
2	I/O Flat Cable	CB-RAC-PIO*** (*** indicates the cable length.)
3	First Step Guide	ME0252
4	Safety Guide	M0194

2. Teaching Tool

The PC software or teaching pendant is necessary to perform setup operations such as position and parameter settings through teaching or other means. Prepare either PC software or teaching pendant.

No.	Part Name	Model	
1	PC Software	RCM-101-MW	
2	PC Software	RCM-101-USB	
3	Teaching pendant	CON-T	
4	Teaching pendant	CON-T/TG	
5	Teaching pendant	RCM-T	
6	Teaching pendant (with deadman switch)	RCM-TD	
7	Simplified Teaching Pendant	RCM-E	
8	Data Setter	RCM-P	

* Fixed type touch panel display (RCM-PM-01) which enables data input, change and monitoring is also prepared. Please note only a few parameters can be set on the display.

* Instruction manuals related to this product

Basic Specifications

Characteristics

1) This product is a position controller that enables to position at 16 points for the standard type and 64 points for the maximum. Number of the positioning points depends on the PIO patterns (can be selected from 6 kinds of control method) that is selectable with the parameters.

- 2) The zone output boarder value can be set for each positioning point.
- 3) The acceleration and deceleration values can be set separately for each positioning point.
- 4) The transfer speed in test run adjustment can be controlled to ensure safety.
- 5) Power saving mode can be selected with a parameter for a use that contains a long time standby.

Installation Environment

This product is capable for use in the environment of pollution degree 2^{*1} or equivalent.

*1 Pollution Degree 2: Environment that may cause non-conductive pollution or transient conductive pollution by frost (IEC60664-1)

- Do not use this product in the following environment
 - Location where the surrounding air temperature exceeds the range of 0 to 40°C
 - Location where condensation occurs due to abrupt temperature changes
 - Location where relative humidity exceeds 85%RH
 - Location exposed to corrosive gases or combustible gases Location exposed to significant amount of dust, salt or iron powder
 - Location subject to direct vibration or impact
 - Location exposed to direct sunlight
 - · Location where the product may come in contact with water, oil or chemical droplets
- When using the product in any of the locations specified below, provide a sufficient shield.
- Location subject to electrostatic noise
- Location where high electrical or magnetic field is present
- Location with the mains or power lines passing nearby

Installation and Noise Elimination

1. Noise Elimination Grounding

- (2) DC solenoid valves, magnet switches and relays [Measure] Install a diode parallel with the coil. Use a
- DC relay with a built-in diode.

4. Heat Radiation and Installation

Conduct design and manufacture in consideration of the control box size, controller layout and cooling in such a way that the temperature around the controller will be 40°C or less.

I/O signals (PIO Type)

Function	description	for I/O Signals	
Category	Signal Abbreviation	Signal Name	Summery of Functions
	CSTR	Start	Start moving with rising edge
	PC1 to PC32	Command Position Number	Input of the position number to move
	*STP	*Pause	OFF to pause (decelerate and stop), ON to reboot
	ST0	Move to Backward Position	Start moving to the backward position with this signal ON for 4-point type Signal input can be selected from edge and level (initial setting) with the parameter
	ST1	Move to Forward Position	Start moving to the forward position with this signal ON for 4-point type Signal input can be selected from edge and level (initial setting) with the parameter
	ST2	Move to Intermediate Position 1	Start moving to the intermediate position 1 with this signal ON for 4-point type Signal input can be selected from edge and level (initial setting) with the parameter
Input	ST3	Move to Intermediate Position 2	Start moving to the intermediate position 2 with this signal ON for 4-point type Signal input can be selected from edge and level (initial setting) with the parameter
	HOME	Home return	Start home-return operation with rising edge
	MODE	Operation Mode	Mode select (ON : Teaching Mode, OFF : Normal Mode)
	PWRT	Current Position Write	Current position is written to the position number selected from PC1 to PC8 after ON status being continued for more than 20msec
	JOG+	+ Jog Move to Positive Direction	Move in positive direction while it is on.
	JOG-	- Jog Move to Positive Direction	Move in negative direction while it is on.
	SON	Servo On	The servo remains ON while this signal is ON OFF while this signal is OFF
	RES	Alarm Reset	Alarm reset with rising edge
	PM1 to PM32	Completion Position No.	Output position number when positioning complete Turns off when next movement started Used to check completion of positioning on PLC side
	MOVE	While in Operation	Turns on while in move, turns off in stop condition Turns off also when stopped by mis-pressing in pressing operation and a pause
	PEND	Position Completion	Turns on within positioning band in the movement to target position Turns on when pressing operation complete
	HEND	Home Return Completion	OFF when turning the power on, ON after home-return operation complete For absolute type, it is ON until the home position is erased by an alarm, etc. once the home return is complete.
	MODES	Current Operation Mode	ON while in teaching selection with MODE signal, OFF in normal condition
Quitout	WEND	Writing Complete	Turns on when complete writing position data with the current position writing command (PWRT)
Output	ZONE1 ZONE2	Zone	Output when the current position of the actuator is in the range set with the parameter after home-return operation complete Used as a replacement for LS at intermediate point and a rough measurement for pressing operation
	PE0	Backward Position Complete	Turns on when complete moving to backward position for 4-point type
	PE1	Forward Position Complete	Turns on when complete moving to forward position for 4-point type
	PE2	Intermediate Position 1 Complete	Turns on when complete moving to intermediate position 1 for 4-point type
	PE2	Intermediate Position 2 Complete	Turns on when complete moving to intermediate position 2 for 4-point type
	SRDY	Operation Ready	Output when servo is on and ready for operation Synchronized to LED "RUN" on the front of the external housing
	*ALM	*Alarm	ON in normal condition, OFF when alarm is generated
	*EMGS	*Emergency Stop	Valid for RCP2-C/CF ON: in normal condition, OFF: in emergency stop

Note : (1) "*" in codes above shows the signal of the active low.
 (2) Do not connect the pins that are not in use (13A, 1B and 2B).
 (3) The power supply lines for NPN type and PNP type are in common. It is not necessary to turn around the power supply line even for PNP.
 (4) *EMGS (emergency stop) that is allocated to the pin number 11B is valid for RCP2-C/CF.

Starting Procedures

When using this product for the first time, make sure to avoid mistakes and incorrect wiring by referring to the procedure below.
Check of Packed Items $N \rightarrow$ Contact the sales shop.
↓ Yes
Installation and Wiring Installation and Wire the actuator and the controller following the instructions described in the Instruction Manual and this guide. → Point Check Item • Is frame ground (FG) connected? • Has the noise countermeasure been taken?
For Absolute Type Connect the battery to the battery connector on the top side of the controller.
↓ Power Supply and Alarm Check Connect a teaching tool such as PC and turn on the port switch to supply power to the controller. ↓ Yes
Servo ON Turn ON the servo motor with the personal computer or teaching pendant operation. Check Item "RUN" turned on in green? Is the status display LED "RUN" turned on in green? Is the atarus display LED of the atarus to have the right treatment.
∴Note The actuator may get slightly dropped by self-weight if servo on and off is repeatedly performed at the same position. Be careful not to pinch the hand or damage the work.
Check of Safety Circuit Check that the emergency stop circuit (or motor drive-power cutoff circuit) operates normally to turn off the servo.
↓Yes
Absolute Reset (for absolute type) Turn the servo on again and perform the home-return operation. Absolute reset can be done by performing the home-return operation. Once the home return is completed, home position gets established and memorized in the position data.
↓
Establishing the Target Position Set the target position to the "Position" box on each position table. Have a home-return operation first when the Direct Teach is performed. When moving the actuator manually, set the Brake Release Switch to BK RLS side for the brake equipped type before the Direct Teach is performed.
↓
 Test Run Adjustment (1) Make the safety speed invalid with using the PC software or the teaching pendant and conduct an operation check. (2) Select "Monitor Mode 2 Safety Speed Invalid / Permit PIO Start" in MANU Operation Mode, then detach the PC or teaching pendant from the controller. (3) Set Mode Switch to AUTO side.

Set-up for operation is completed. Perform the system operation adjustment.
